

Company profile

Your lot runs itself

Smart parking lot management: plate-based entry, mobile payment, and staff and cash in view – from anywhere.

park.goobab.com

The challenge

Your lot leaks more than you think

Cash with no receipts

Money changes hands, and you never know how many cars came in or what was really paid.

Staff you can't see

Who showed up? Who was late?
Where is the shift's cash?

Lots far away

Every extra lot means more trips and calls, with no live picture.

Handshake subscriptions

Deals on a word, forgotten renewals, late payments.

A receipt copy at the gate

Your restaurant deals rely on a paper slip at the gate – no data.

Strangers in your store's lot

Someone buys a two-dirham item and stays all day; neighbours wait there.

Four parts working as one

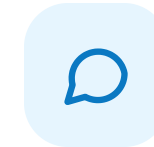

Camera and barrier

Reads the plate, opens for subscribers and paid cars, stays shut for others.

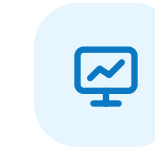

Mobile app

For drivers, owners, guards, supervisors and accountants – each sees their part.

WhatsApp bot

Check in by message, a pay link on the way out, the nearest open lot.

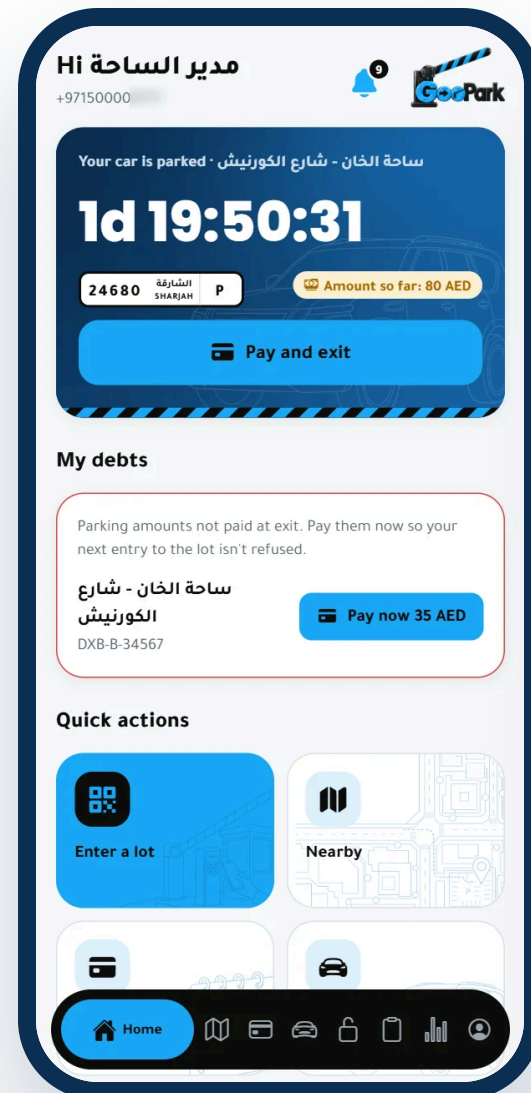

Web dashboard

All your lots, numbers, staff and books on one screen.

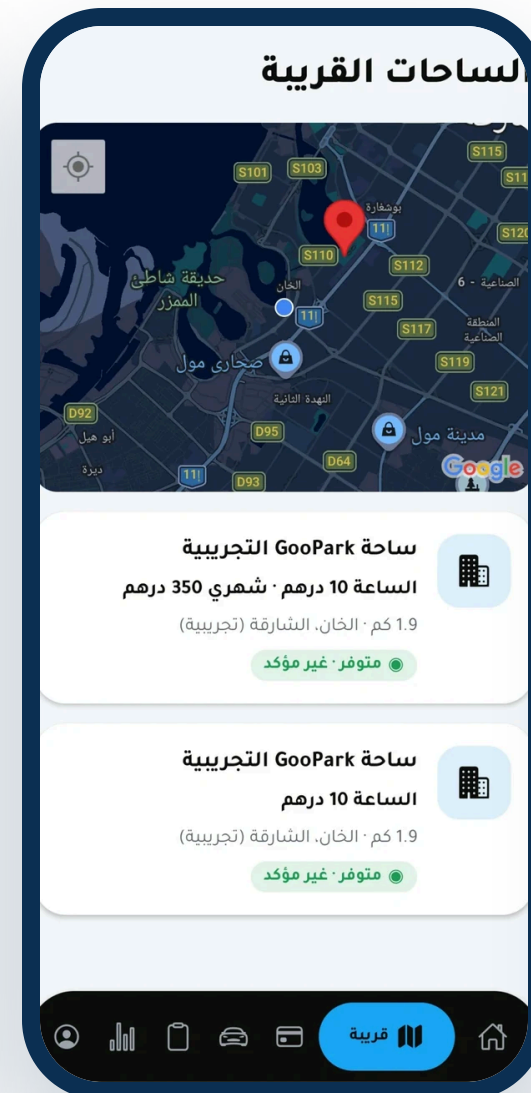

Start today with zero hardware cost. An open lot with no barrier runs on the app and the WhatsApp bot alone – add the camera and barrier whenever you are ready.

One app – every role sees what is theirs

Classify and collect

The driver's journey

No ticket, no queue

Three steps, and the driver doesn't even need an app – a WhatsApp message is enough.

1

Drive in

The camera reads the plate, or the driver sends the lot code on WhatsApp, and the barrier opens.

2

Park

Time is counted at your prices; the driver sees the amount any time on their phone.

3

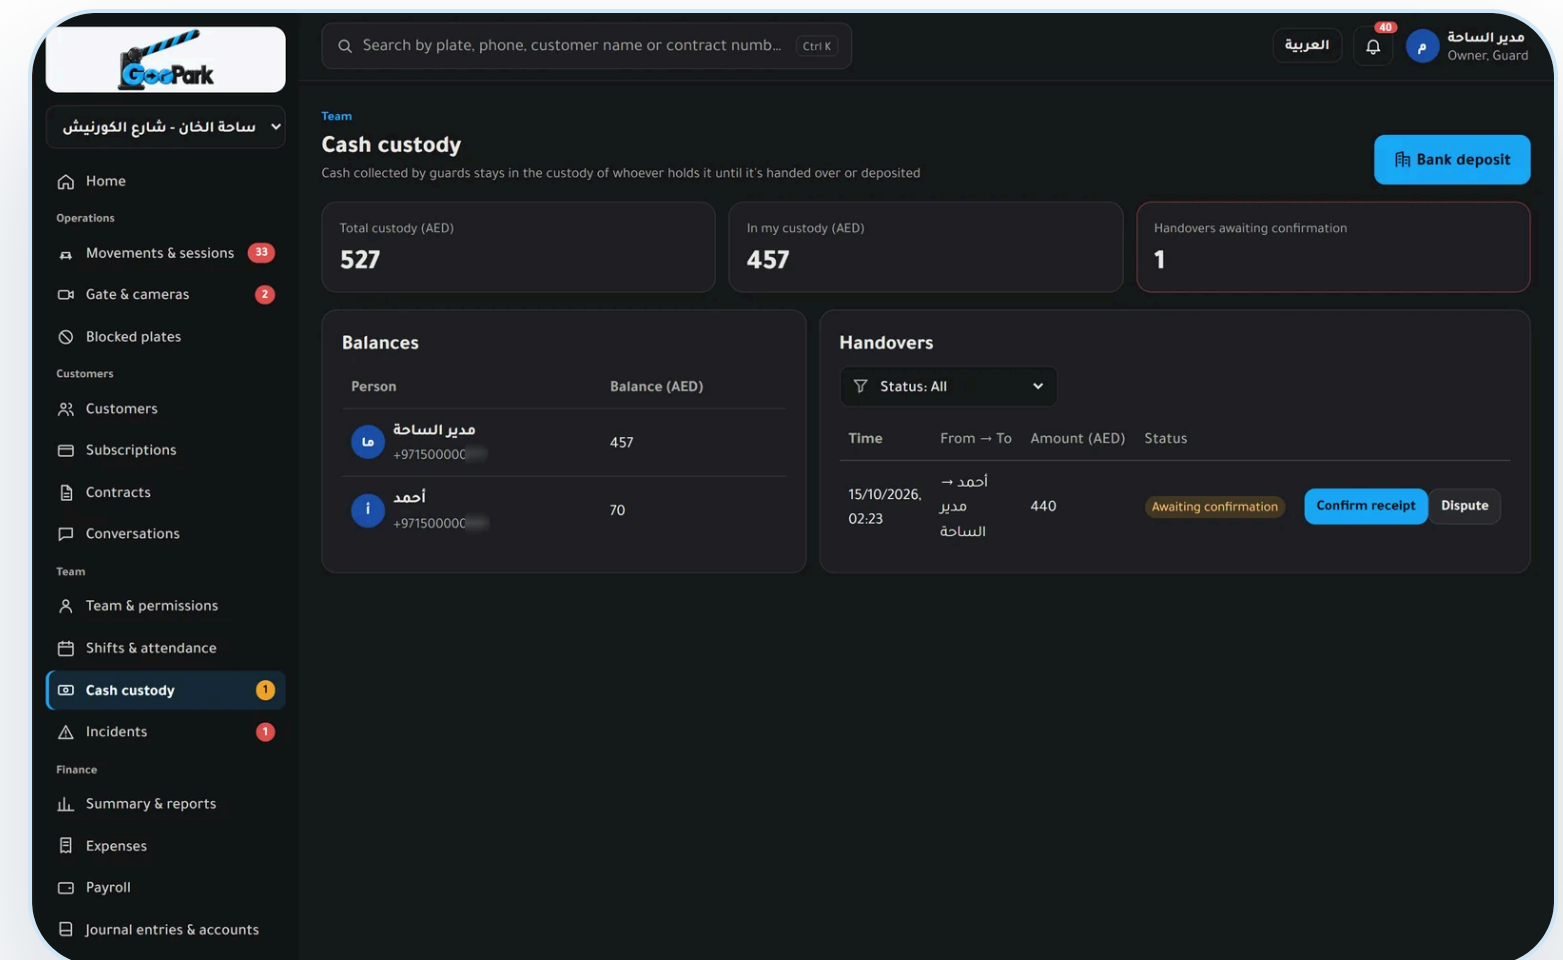

Pay and leave

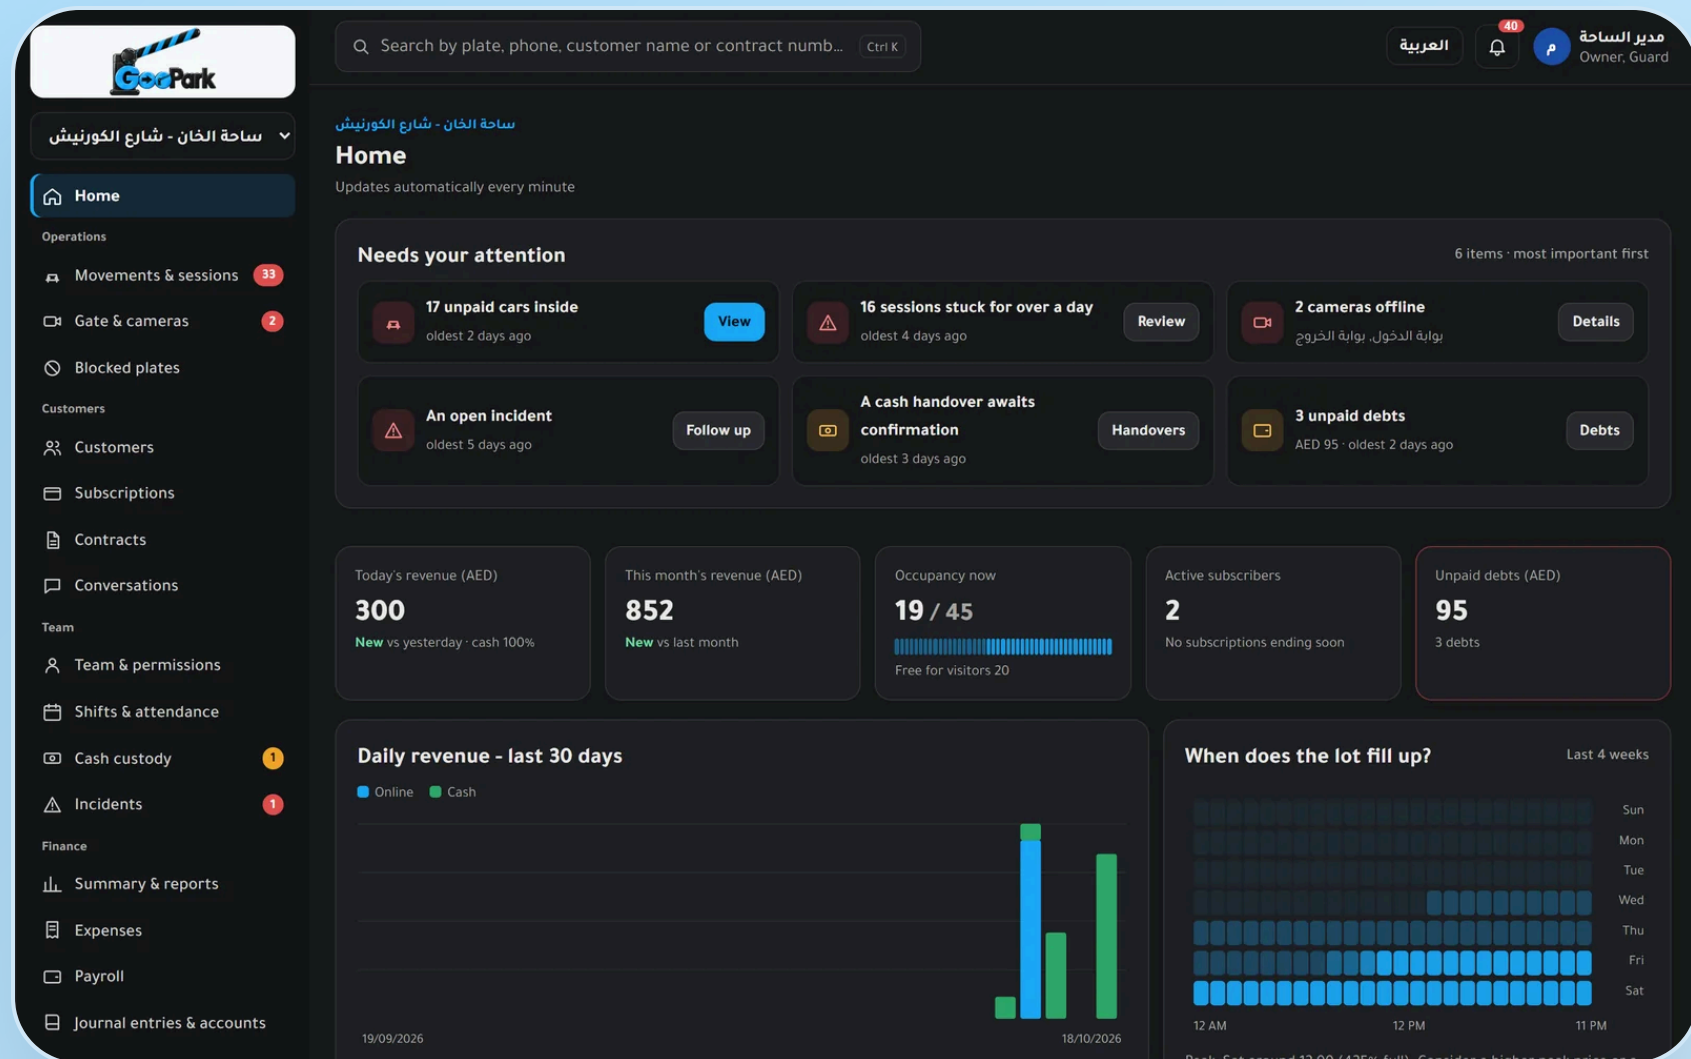

By card or Apple Pay from the link, or cash to the guard – the barrier opens and a receipt arrives.

Staff and cash

Every dirham has a receipt, every shift a record

- ✓ Guards can only start a shift from inside the lot; lateness is logged and you're alerted if someone doesn't show.
- ✓ Every payment is tied to the guard and shift – even cash sends the driver a receipt.
- ✓ Cash handovers record expected vs received; any shortfall shows at once.
- ✓ An activity log: who did what, and when.

Your lots, from anywhere

As if you were at the gate

- ✓ Occupancy now, today's and the month's income (cash and online), and peak hours.
- ✓ All your lots under one business, one tap apart.
- ✓ "Needs your attention": a camera offline, an unpaid car, a stuck session.
- ✓ Open the barrier remotely, with the reason logged.

Subscriptions and contracts

Written agreements, renewals nobody forgets

Monthly passes

Monthly and yearly plans via WhatsApp or the app, with a reminder before expiry.

Personal and fleet contracts

An e-contract signed by both sides, with PDF, automatic invoices and renewal – it pauses if unpaid.

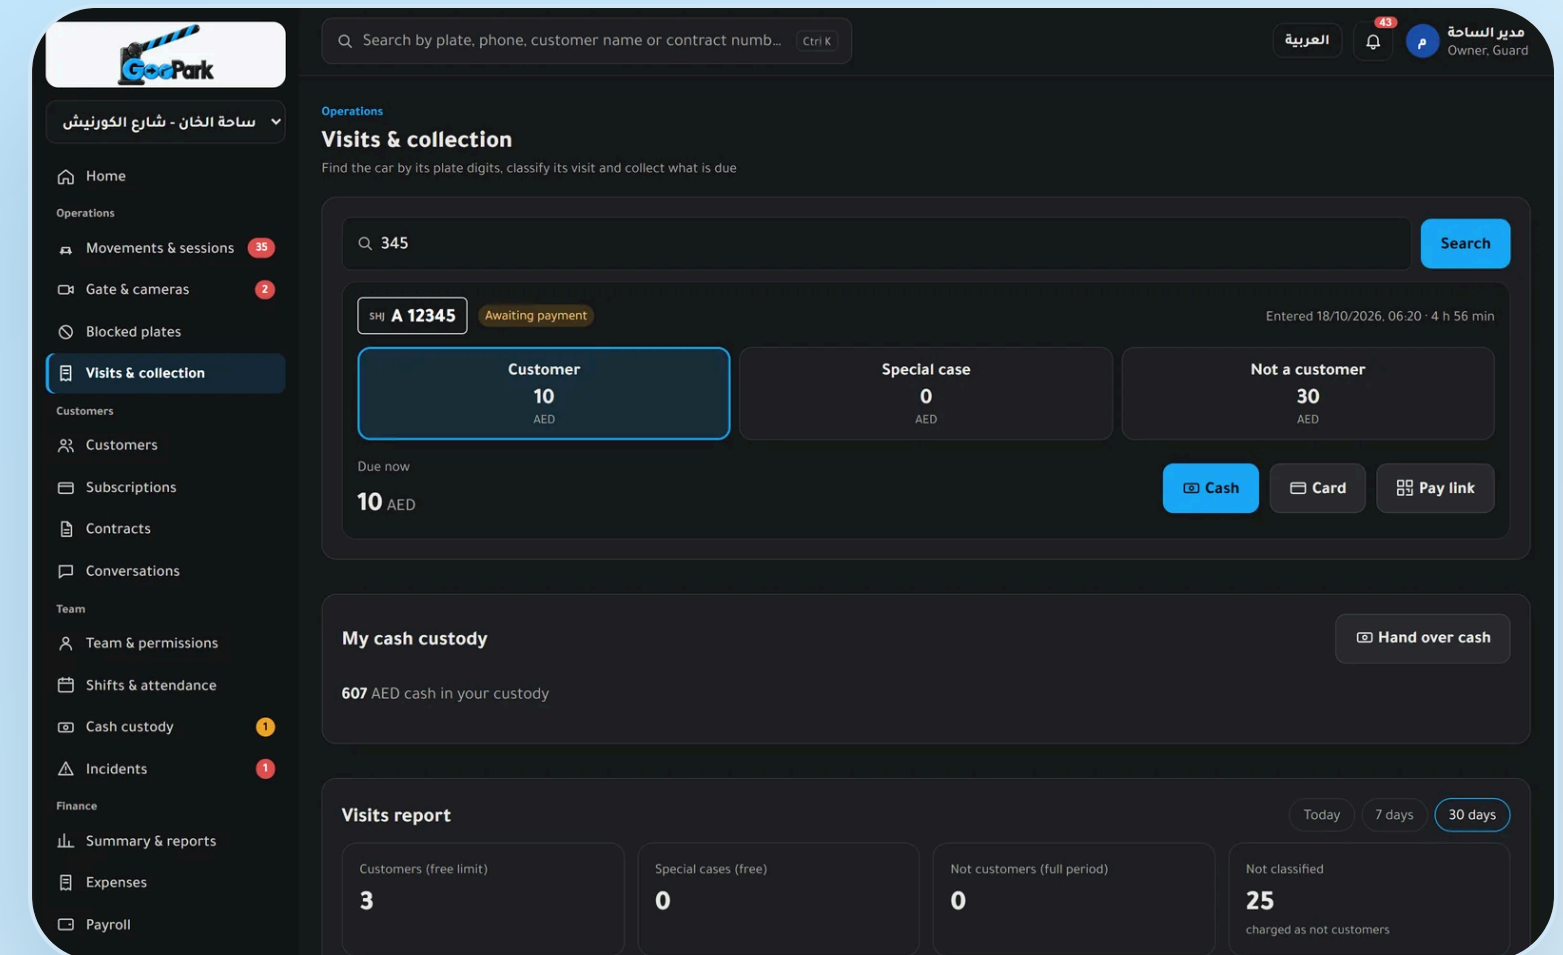

Partner restaurants and shops

The restaurant's staff cover a customer's car by plate, within daily and monthly limits – no paper slip.

Store lots

Your lot is for your customers, not passers-by

- ✓ Customers park free up to the time you set; longer stays are charged at your rate.
- ✓ Your staff decide: customer, a free special case with a written reason, or not a customer – who pays the full stay.
- ✓ Anyone who skips your staff pays via a QR code at the exit – no guard needed.
- ✓ Business hours and holidays: no visitor entry while the store is closed.

Money goes straight to you

No middleman holds your money

Each lot is linked to its owner's own payment account, so money lands with you directly. Goobab never holds your funds.

Card and cash, one record

Card and Apple Pay through a Ziina or Mamo link, or cash to the guard.

Books, ready

Automatic journals, VAT, profit and loss per lot, Excel export.

Expenses with receipts

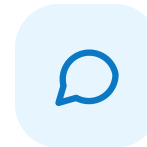

A receipt photo with every expense, a slip photo with every deposit.

Built for the UAE from day one

Arabic and English

App, dashboard and bot
- with UAE and GCC plate
formats.

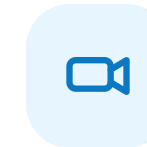

WhatsApp first

Drivers don't need an app
to park and pay.

Your data, protected

Role permissions,
encrypted files, daily
backups.

Hardware

We supply, install and
maintain - or you install
GooPark-compatible
devices.

No car ever gets trapped. If the internet drops, exits are still logged, and any unpaid amount becomes a debt on the plate.

Our products

From the same team

Goobab

Smart gate management for residential towers and communities: residents and their guests get in via WhatsApp or the app – strangers don't.
